## Lawn Seed Information

### Hardwearing

Made up from the following blend: Ryegrass, Fescue and Browntop.

Sow approx 1kg per 32 square metres.

Hardwearing is ideal for light traffic and play areas.

This blend is recommended as a good all purpose lawn.

Available in pack sizes: 200g, 500g, 1kg and 2kg.

### Superfine

Made up from the following blend: Fescue and Browntop.

Sow approx 1kg per 32 square metres.

Superfine is the ideal lawn seed if you are after a fine finish.

Available in pack sizes: 200g, 500g, 1kg and 2kg.

### Turf Rye

Made up from: Ryegrass

Sow approx 1kg per 32 square metres.

Turf Rye is suitable for play grounds, shady and dry positions and heavy traffic area.

Available in pack sizes: 200g, 500g, 1kg and 2kg.

## Application of Lawn Seed:

### Preparing Ground for a New Lawn

Approx 2 weeks before sowing your lawn, prepare your ground by clearing weeds and debris. Even out the ground surface and apply Morton Smith-Dawe Lawn Fertiliser approx 20g per square metre and water in well.

### **Sowing New Lawn**

Rake lightly to loosen surface and to ensure surface is even. Apply Morton Smith-Dawe Lawn Seed approx 1kg per 32 square metres and rake very lightly to ensure seed is covered with a light layer of soil.

### **Watering New Lawn:**

It is important to keep your new lawn moist at all times in the first 2-3 weeks to ensure more even growth.

When watering use a mist spray until lawn is fully established, ensuring water does not puddle.

### **Mowing**

Allow your new lawn approx 6cm in growth before mowing and cut very lightly leaving approx 3cm of length. Repeat for the next 3-4 times. Once your lawn is established or after 3-4 months, apply Morton Smith-Dawe Lawn Fertiliser using approx 35g per square metre, water in well. This will help with growth and to ensure a lush green lawn.
